Release Highlights

Release Highlights v1.0

- Representing the backend of the framework of XCOFDK, provide both public API and implementation of framework's RTE.
- Improved robustness and stability.
- Improved shutdown sequence.
- Start the RTE if initiated by an authorized frontend package only, e.g. PyPI package `xcofdk`, which is also referred to as the default frontend package.
- Always provide the default functional scope to the default frontend package `xcofdk` whose use is free of charge.
- Drop support for subclassing (from former classes `XTask` and `XMainTask`).
- Drop support for Python versions 3.10 and older.
- Drop support for experimental free-threaded Python.
- Use Cython extensions of protected subpackages when building install wheel.
